The Neurosciences Research Program, sponsored by the Massachusetts Institute of Technology, is an interdisciplinary, interuniversity organization with the primary goal of facilitating the investigation of the physical and biological basis of mental processes including memory and learning. To this end, the NRP, as one of its activities, conducts scientific meetings to explore crucial problems in the neurosciences and publishes reports of these Work Sessions in this *Bulletin*. NRP is supported in part by National Institutes of Health Grant No. GM10211, National Aeronautics and Space Administration Grant No. Nsg 462, The Rogosin Foundation, and Neurosciences Research Foundation.
